ACKNOWLEDGEMENT

The authors would like to thank the Director General of Health for his tremendous support in the implementation of the Tobacco & E-Cigarette Survey among Malaysian Adolescents (TECMA) 2016. Gratitude to the Deputy Director General of Health (Research and Technical Support) and the Director of the Institute for Public Health for their continuous advice, guidance and support throughout the process of this survey. Thank you to the Ministry of Health Malaysia for the funding of this survey.

In addition to that, we would also like to thank the Ministry of Education Malaysia for their assistance especially in the sampling process and preparation of data collection. Our warm gratitude to all the principals, headmasters and corresponding teachers of the selected schools for their support given during the survey. Thank you to all field supervisors, data collectors, scouts, drivers and all individuals who have assisted in the implementation of the survey.

Last but not least, our sincere appreciation to all students who have participated in the survey. Their contribution in the survey would provide the current information for the Ministry of Health to assist in formulation of suitable policies for cigarette & e-cigarette services in Malaysia.

INTRODUCTION

1. INTRODUCTION

Smoking-related diseases are the major causes of premature death globally. Each year 6 million smoking-related deaths were reported worldwide (CDC, 2015). If there is no change in the current smoking pattern, 8 million deaths are expected by 2030, in which 80% will occur in lower and middle income countries (LMIC) (WHO, 2011). Without exception, Malaysia is also facing a similar situation. With 10,000 deaths reported each year, smoking related diseases was a major cause of mortality among the Malaysian population since 1980s. If the trend of smoking persists, the mortality is expected to triple to 30,000 by 2030 (MOH CPG, 2003).

Plethora of studies revealed that smoking is a behaviour learned and started during adolescents (Hopkins et al. 2013; Robinson & Bugler 2008; Kyrles et al. 2007; GYTS 2002). The earlier an individual starts to smoke, the higher the likelihood he or she will continue the smoking habit into adulthood and the less likely the individual will cease smoking in view of the nicotine addiction (Breslau & Peterson 1996). In addition, a study has shown that early smoking initiation is associated with higher risk of developing lung cancer (BMA 2007). The younger the age of smoking initiation, the greater the harm it produces. Early uptake is associated with subsequent heavier smoking, higher levels of dependency, a lower chance to stop smoking, and higher mortality (RCP 2010). Therefore, it is vital for the government to take actions in the prevention of initiation of smoking among adolescents in order to ensure long term reduction of smoking prevalence among Malaysians.

The first Global Youth Tobacco Survey (GYTS) conducted in 2003 reported that 20.2% (CI 16.6 – 24.3) of 13-15 years' school-based adolescents were current smokers. The prevalence was seen higher among males (36.3%, CI 30.6-42.5) when compared to females (4.2%, CI 3.0-5.9). Subsequently, GYTS conducted in 2009 reported a reduction of prevalence of current cigarette smokers among adolescents, 18.2% (CI 14.6 – 22.5). This reduction was mainly due to the lower prevalence among male smokers of 30.9% (CI 25.0 – 37.4) in 2009. In contrast, an increase was observed among female smokers (5.3%, CI 3.5 – 7.9).

Apart from the burden of cigarettes, the use of electronic cigarettes or e-cigarettes has emerged as an alternative habit among Malaysian adolescents. The National Health and Morbidity Survey (NHMS) 2015 revealed that the prevalence of the current use of smokeless tobacco products which include e-cigarettes has increased tremendously from 1.9% (CI 0.9, 3.99) in 2011 to 10.9% (CI 10.1, 11.7) (GATS 2011, NHMS 2015). This tremendous increase was not observed in the previous NHMS studies. Correspondingly worldwide, many studies have reported increasing trends of e-cigarette usage. The National Youth Tobacco Survey (NYTS) in the US reported double the prevalence of e-cigarette usage among US high-school students from 4.7% in 2011 to 10% in 2012 (Centre for Disease Control and Prevention, 2013). In addition, a study in New Zealand among 14-15 year olds reported tripled increase of ever-use of e-cigarettes from 7% in 2012 to 20% in 2014 (White et al., 2015). Moreover, one in six of 15-year-olds in Greece reported ever used of e-cigarettes in 2014 (Fotiou et al., 2015).

E-cigarettes have been introduced as an alternative for smoking cessation. However, studies have revealed that there is no difference in rates of successful quitting between e-cigarette users & non-users (Lee et al. 2014). In addition, studies in six US states found that e-cigarette users were significantly less likely to quit after 7 months, compared to those who never tried e-cigarettes (Vickerman et al. 2014). This is substantiated by studies from Anand et al. (2015) and Goniewicz et al. (2014) which revealed that smokers who used e-cigarettes as a cessation tool ended up as dual users. Meanwhile, a national study of schools in the United States found that 80.5% of high school students used e-cigarettes concurrently with conventional cigarettes indicating a high level of dual users (USCDCP, 2013).

Studies have also revealed that a substantial number of adolescent e-cigarette users were non-conventional cigarette smokers. Studies by Bostean et al. (2015) found more than 50% (nearly 60,000 students) of adolescents in California who used e-cigarettes were not conventional cigarette smokers. Similarly, a study by Barringtons-Trimis et al. (2015) in the same locality had also revealed a similar proportion. Meanwhile in Europe, a longitudinal study in Germany by Hanewinkel & Isensee (2015) found that 23.8% adolescent e-cigarette users have never smoked conventional cigarettes. This evidence was supported by the findings from Dautzenberg et al. (2013) & Dutra & Glanz (2014) studies which concluded that adolescents did not use e-cigarettes as a measure to reduce or quit smoking but rather more towards experimentation. This increasing trend of behaviour among adolescents has seemed to influence other non-smoker peers to follow suit (Kong G. et al 2014). The popularity of e-cigarettes might be due to lack of local regulation in controlling the market of e-cigarettes with addition of various appealing flavours which were easily available over the counter for users (Kong G. et al 2014). Electronic media is also to be blamed for portraying e-cigarettes as a safer and more fashionable alternative to cigarettes (Grana & Ling, 2014, Rooke & Amos 2013). Despite the burden of smoking an e-cigarette, there is no complete information available in the local settings to support the formulation of policies to curb this electronic form of nicotine delivery system. Therefore, this study is vital to provide the most current information to assist in the formulation of suitable policies.

1.1 Objectives of the study

1.1.1 General Objectives

To monitor tobacco and e-cigarette use among school going adolescents in Malaysia.

1.1.2 Specific Objectives

1. To determine the prevalence of tobacco use among Malaysian adolescents.
2. To assess the knowledge and behaviour towards tobacco among Malaysian adolescents.
3. To determine the prevalence of vape & e-cigarette users among Malaysian adolescents.
4. To assess knowledge and behaviour towards vape & e-cigarette usage among Malaysian adolescents.
5. To determine the prevalence of dual users.
6. To determine the prevalence of usage of other tobacco related products (Shisha) & Smokeless Tobacco Product among Malaysian adolescents.

METHODOLOGY

2. METHODOLOGY

This cross-sectional study was designed to represent the school-going adolescents aged 10-19 years old at public and private schools, both at the national and urbanity level.

2.1 Sampling Frame and Target Population

The sampling frame was provided by the Ministry of Education (MOE) based on an updated data of school-going adolescents in 2014. Students from standard four until standard six from primary schools and form one until form six from secondary schools were eligible as respondents. Participants were required to be able to understand the Malay language or English. Special Education Schools (*Sekolah Pendidikan Khas*) were excluded in the sampling frame.

2.2 Sampling plan

In order to ensure representativeness of the samples, a two stage stratified cluster sampling design was used in this survey. Malaysia was stratified into 15 states (including WP Kuala Lumpur & WP Putrajaya) and by schools urbanity status according to the MOE's definition. Schools formed the Primary Sampling Unit (PSU). The first stage involved the selection of the PSU for each states taking account the urbanity status from the school sampling frame. This was performed by using systematic probability sampling proportional to the students enrolment size of standard four (primary school) until upper six (secondary school) students. The second stage involved the selection of class at the selected schools. Classes formed the Secondary Sampling Unit (SSU). This was performed by using a simple random sampling method. All students from the selected classes were then recruited for the survey.

2.3 Sample Size Calculation

The sample size required was calculated by using a single proportion formula based on the lowest expected prevalence of the variables, taking account the level of confidence and the margin of error desired.

$$n_{SRS} \geq \frac{Z^2_{\alpha/2} P(1-P)}{e^2}$$

The sample size was calculated based on an estimated prevalence of 3% e-cigarette used among adolescents from a regional study (Lee et. al, 2014) with 1.5% margin of error and 95% confidence interval. This was then adjusted to the total number of target population (N) (Based on estimated school going adolescents in 2014), design effect of 1.5 and expected non-response rates of 20%. A total sample of 932 students per state was required. Therefore, a total of 13,980 students from 138 schools from 15 states were needed to be recruited for this survey.

2.4 Sample distribution

Table 2.1 shows the distribution and response rate of the selected schools. Altogether 138 schools were selected in which 82 schools were situated in the urban area and 56 schools were from the rural area. Out of this, 136 schools gave approval for the study (Schools Response Rate 98.6%). A total of 13162 adolescents had agreed to participate in the survey from 537 selected classes (classes response rate = 99.0%) giving students a response rate of 88.7%. The overall response rate for the survey was 86.6%.

Unsuccessful surveys at the student level were due to:

- Refusal: The students refused to be interviewed.
- Absent: The students were absent on the day of the survey.
- Not consented: The students had no parental consent.
- Unable to read: The students had difficulty in reading.

Table 2.1: Response Rates for Schools Visit

2.5 Data collection

2.5.1 Questionnaire

This survey used a structured questionnaire which had been developed with input from researchers and experts in tobacco and smoking from the Ministry of Health. Questions from WHO, Global Youth Tobacco Survey were also adopted in the questionnaire. The questionnaire was prepared in bilingual (Bahasa Melayu and English) and was pre-tested and validated. Table 2.2 shows the structure of the questionnaire.

Questionnaires and OMR used were as shown in [Appendices](#).

2.5.2 Field Data collection

Field data collection was conducted about a month starting from the 4th until the 30th April 2016. Malaysia was divided into six zones and the data collection was conducted concurrently at each zone. Each zone was headed by a Field Supervisor (FS) with a team of Research Assistants (RA) for data collection. A total of 16 teams were formed, one team was allocated to each state except for Sarawak in which two teams were formed. Each RA was specifically trained to conduct the survey. Each team was headed by a team leader (TL) with one driver and two data collectors. The person-in-charge in each school was contacted prior to the data collection. School approval was obtained from the schools highest authority. Parental and students consent forms were given to the person-in-charge for distribution. On the day of the data collection, parental and students consents forms were collected prior to the survey. Students who had consented to participate in the survey were assembled at the allocated location in the school. Each respondent was given a set of questionnaire together with the OMR form. Respondents were required to fill the answers in the OMR form. Both the questionnaire and the OMR form were then collected and were returned to the Institute for Public Health at an allocated date and time for each zone.

2.6 Data Quality Control

Data quality check was performed in two phases. Phase 1 check were conducted at the field in which the Field Supervisor (FS) were given the responsibility to supervise the data collection process and

to review all filled OMR forms and questionnaires at the end of the survey. Phase 2 data quality check was performed at the Institute for Public Health. First, quality check started at Station 1 where the bundles of the filled OMR forms and questionnaires were received. The schools' ID, class ID and students' ID were examined and compared with the original lists. Any discrepancy was referred back to the team leader. Once cleared, the OMR forms were transferred to Station 2. Here the forms were scanned. After scanning, the OMR forms were transferred to Station 3. Here, the data captured by the scanner was verified by the verifiers.

2.7 Data Management and Analysis

Data captured by the scanner in Excel forms were exported to SPSS statistical software for analysis. Quality of the data was then examined and data cleaning was performed. An appropriate statistical analysis was used to measure the prevalence of smoking, e-cigarette usage and other relevant analysis. A complex sample analysis was used and the analysis was conducted based on the dummy tables prepared by the research team.

2.8 Socio-demographic characteristics of respondents of the Tobacco & E-Cigarette Survey among Malaysian Adolescents (TECMA)

Table 2.3 shows the socio-demographic characteristics of respondents of the Tobacco & E-Cigarette Survey among Malaysian Adolescents (TECMA). The distribution of male and female students was almost equal, 50.1% and 49.9% respectively. The respondents from the urban areas (58.5%) were more compared to the rural areas (41.5%). There were more secondary schools students (69.4%) who were respondents compared to primary school students (39.6%). This is due to the age range that was used in this survey which is 10 to 19 years.

Table 2.3: Socio-demographic characteristics of respondents of the Tobacco & E-Cigarette Survey among Malaysian Adolescents (TECMA).

Socio-demographic Characteristics	Count	%
Sex		
Male	6582	50.1
Female	6554	49.9
School Level		
Primary education	4020	30.6
Secondary education	9116	69.4

TOBACCO USE

3. TOBACCO USE

Key findings

- 14.2% (95% CI: 12.4, 16.3) of adolescents were current tobacco smokers while 27.2% (95% CI: 25.1, 29.5) of them were ever tobacco smokers
- The prevalence of current cigarette smokers among adolescents was 11.7% while the prevalence of ever cigarette smokers was 21.4%.
- The prevalence of current cigarette smokers among adolescents aged 13-15 years old was 14.8% (95% CI: 11.7, 18.5).
- 78.7% of ever cigarette smokers tried their first cigarette before the age of 14.
- 39.7% of current cigarette smokers did not have nicotine dependence, while a further 28.5% had very low nicotine dependence.
- 76.7% of current cigarette smokers wanted to stop smoking.
- A total of 37.8% of the adolescents were exposed to Second Hand Smoke (SHS) at home and 51.2% were exposed in public places.
- Nearly nine in ten (87.3%) adolescents had seen anti-tobacco messages.

3.1 Introduction

The tobacco epidemic is one of the biggest public health threats the world has ever faced. Nearly 80% of the more than 1 billion smokers worldwide live in low- and middle-income countries (WHO, 2015).

Plethora of studies revealed that smoking is a behaviour learned and started during adolescents (Hopkins et al. 2013; Robinson & Bugler 2008; Kyresi et al. 2007). The earlier an individual starts to smoke, the likelihood he or she will continue the smoking habit into adulthood is higher and the less likely the individual will cease smoking in view of nicotine addiction (Breslau & Peterson 1996). In addition, a study has shown that, the earlier the starting age, the higher the risk of developing lung cancer (BMA 2007).

The first Global Youth Tobacco Survey (GYTS) conducted in 2003 reported that 20.2% (95% CI: 16.6, 24.3) of 13-15 year old school-based adolescents were current smokers. The prevalence was seen higher among males [36.3% 95%, CI 30.6-42.5] compared to females (4.2%, 95% CI: 3.0, 5.9). Subsequently, the GYTS conducted in 2009 reported a reduced prevalence of current cigarette smokers among adolescents, 18.2% (95% CI: 14.6, 22.5).

This study was aimed to identify the prevalence of tobacco use, smoking cessation, exposure to second hand smoke, knowledge and behaviour towards tobacco among Malaysian adolescents aged 10 to 19 years old.

3.2 Tobacco Products Users

3.2.1 Current Tobacco Smokers

Overall, 14.2% (95% CI: 12.4, 16.3) of Malaysian adolescents aged 10 to 19 years were current tobacco smokers. It was noticed that the prevalence was significantly higher in males 24.3% (95% CI: 21.39, 27.47) as compared to females 3.7% (95% CI: 2.8, 5.0). Perlis had the highest prevalence of current tobacco smokers [22.9% (95% CI: 17.1, 30.0)] while Terengganu had the lowest prevalence of current tobacco smokers [10.0% (95% CI: 6.3, 15.3)] (**Table 3.2**).

Among the adolescents, 3.6% (95% CI: 3.0, 4.4) were current traditional hand rolled cigarette smokers. More males [(6.5%, 95% CI: 5.3, 7.9)] than females [0.6%, 95% CI: 0.4, 0.9)] were current traditional hand rolled cigarette smokers (**Table 3.3**).

It was found that 2.2%, (95% CI: 1.8, 2.7) of the adolescents were current ‘roll your own’ with cigarette paper users with a higher percentage among males [3.9%, (95% CI: 3.1, 4.8)] as compared to females [0.5%, (95% CI: 0.3, 0.8)] (**Table 3.3**).

It was found that 1.2% (95% CI: 0.9, 1.5) of the adolescents currently smoked cigars and 0.8% (95% CI: 0.6, 1.1) smoked pipes (**Table 3.3**).

3.2.2 Ever Tobacco Smokers

A total of 27.2% (95% CI: 25.1, 29.5) of the adolescents were ever tobacco smokers, with males having a higher prevalence [41.4%, 95% CI: 38.1, 44.8)] as compared to females [12.4%, 95% CI: 10.8, 14.2)] (**Table 3.2**).

It was estimated that 8.5% (95% CI: 7.4, 9.8) of the adolescents had ever smoked traditional hand roll cigarettes. The prevalence was five times higher in males [14.1% (95% CI: 12.1, 16.3)] as compared to females [2.6% (95% CI: 2.0, 3.5)] (**Table 3.3**).

Another type of tobacco product used by the adolescents was the ‘roll-your-own’ with cigarette paper. It was estimated that 4.8% (95% CI: 4.1, 5.6) were ever users, with 8.2% (95% CI: 7.0, 9.6) males and 1.2% (95% CI: 0.9, 1.7) females (**Table 3.3**).

It was found that 2.2% (95% CI: 1.7, 2.8) ever smoked cigars and 1.4% (95% CI: 1.1, 1.8) ever smoked a pipe (**Table 3.3**).

3.2.3 Current Smokeless Tobacco Users

The prevalence of current smokeless tobacco users among the adolescents was 11.0% (95% CI: 9.6, 12.5). More male adolescents [17.1% (95% CI: 15.2, 19.2)] were current smokeless tobacco users compared to the female adolescents [4.5% (95% CI: 3.5, 6.0)] (**Table 3.2**).

It was found that 3.5% (95% CI: 2.9, 4.1) of the adolescents were current snuff users and the prevalence was higher among males (4.5%, 95% CI: 3.8, 5.4) as compared to females (2.4%, 95% CI: 1.6, 3.4). The prevalence of current chewing tobacco users was 0.6% (95% CI: 0.4, 0.8) (**Table 3.3**).

3.2.4 Ever Smokeless Tobacco Users

Overall, 22.9% (95% CI: 20.9, 25.0) of the adolescents had ever used smokeless tobacco. The prevalence was significantly higher among males (33.7%, 95% CI: 30.8, 36.8) as compared to females (11.5%, 95% CI: 9.8, 13.5) (**Table 3.2**).

It was found that 5.6% (95% CI: 4.9, 6.6) of the adolescents had ever used snuff. More males [7.1%, 95% CI: 6.1, 8.3] had ever used snuff compared to females [4.1% 95% CI: 3.1, 5.4]. The prevalence of ever chewing tobacco users was 0.6% (95% CI: 0.5, 0.9) (**Table 3.3**).

3.2.5 All Tobacco Product Users (Smoked and Smokeless)

More than a quarter [28.6% (95% CI: 26.5, 30.9)] of the adolescents were ever tobacco users with males having a significantly higher prevalence of 42.8% (95% CI: 39.5, 46.1) compared to females [13.8% (95% CI: 12.2, 15.6)] (**Table 3.2**).

In total, 16.0% (95% CI: 14.1, 18.0) of the adolescents were found to be current tobacco users. There was a significant difference in terms of gender with 26.2% (95% CI: 23.4, 29.3) of males being current tobacco users compared to 5.3% (95% CI: 4.2, 6.7) of females (**Table 3.2**).

3.3 Current cigarette smokers

3.3.1 Prevalence of current cigarette smokers

The prevalence of current cigarette smokers among the adolescents was 11.7% (95% CI: 10.0, 13.6) (**Table 3.4**). More than one in five male adolescents were current cigarette smokers [21.1% (95% CI: 18.2, 24.2)]. The prevalence was significantly lower among females where only 2.1% (95% CI: 1.4, 3.1) were current cigarette smokers.

The prevalence was almost three times higher among adolescents in secondary schools [15.2% (95% CI: 12.8, 17.9)], as compared to those in primary schools [5.8% (95% CI: 4.4, 7.5)]. The prevalence of current cigarette smokers in rural schools was almost twice as much [14.9% (95% CI: 12.2, 18.1)] compared to the prevalence in urban schools [7.9% (95% CI: 6.4, 9.5)].

The three states with the highest prevalence of current cigarette smokers were Perlis [15.8% (95% CI: 11.2, 21.9)], Sabah & WP Labuan [14.1% (95% CI: 8.9, 21.6)] and Johor [14.0% (95% CI: 7.6, 24.4)]; while the states with the lowest prevalence were Terengganu [7.4% (95% CI: 4.4, 12.1)], WP Kuala Lumpur [8.4% (95% CI: 5.0, 13.7)] and WP Putrajaya [8.9% (95% CI: 5.6, 13.7)]. The prevalence of current cigarette smokers among adolescents aged 13-15 years old was 14.8% (95% CI: 11.7, 18.5). The GYTS in 2009 reported a prevalence of 18.2% (95% CI: 14.6, 22.5) of current cigarette smokers in this same age group (**Table 3.4**).

3.3.2 Number of cigarettes smoked per day

Overall, more than a third of current cigarette smokers smoked 2 – 5 cigarette sticks per day [36.8% (95% CI: 30.4, 43.7)] (**Table 3.7**). About a quarter smoked only 1 cigarette stick per day [25.7% (95% CI: 22.1, 29.7)]. A smaller percentage smoked 11 – 20 cigarette sticks per day [3.4% (95% CI: 2.2, 5.2)] while only 2.3% (95% CI: 1.3, 3.9) smoked more than 20 cigarette sticks per day.

Among the male current cigarette smokers, most of them [38.7% (95% CI: 32.1, 45.8)] smoked 2 – 5 cigarette sticks per day, while among the females, majority was reported to have smoked less than 1 cigarette stick per day [42.9% (95% CI: 23.5, 64.8)] (**Table 3.7**).

3.3.3 Frequency of cigarette smoking in the past 30 days

Most of the adolescents who were current cigarette smokers smoked for 1-2 days in the past one month [42.8% (95% CI: 37.4, 48.4)]. Among the female current cigarette smokers, majority of them [76.0% (95% CI: 57.0, 88.3)] smoked for 1-2 days in the past one month as compared to their male counter parts [39.6% (95% CI: 34.5, 45.0)]. More than 1 in 10 current cigarette smokers smoked every day in the past one month [13.9% (95% CI: 11.3, 17.0)] (**Table 3.8**).

3.3.4 Accessibility and availability of cigarettes

The legal age for purchasing cigarettes in Malaysia is 18 years and above. The findings of this survey indicated that 50.6% (95% CI: 45.5, 55.7) of adolescents below the age of 18 years were not prevented from buying cigarettes. Nearly half [49.0% (95% CI: 43.6, 54.4)] of the male adolescents and 55.5% (95% CI: 44.0, 66.6) of the female adolescents were not prevented from buying cigarettes due to their age.

Sources for obtaining cigarettes among the adolescent smokers, in the past 30 days, mostly was by purchasing them from supermarkets, grocery stores or roadside stalls [42.5% (95% CI: 37.9, 47.2)]. This was followed by sharing the cost of cigarettes with their friends [28.5% (95% CI: 25.3, 32.0)]. Other sources include (a) getting cigarettes from someone else [18.6% (95% CI: 15.2, 22.5)], (b) paying someone else to buy cigarettes [9.5% (95% CI: 7.3, 12.2), (c) borrowing cigarettes from someone else [8.3% (95% CI: 6.1, 11.1), (d) stealing cigarettes [3.4% (95% CI: 2.0, 5.7)], (e) getting cigarettes from family members [3.2% (95% CI: 2.2, 4.6)] or (f) getting cigarettes in some other way [5.9% (95% CI: 3.0, 11.0)] (**Table 3.9**).

Among the male current cigarette smokers, majority of them purchased their cigarettes from supermarkets, grocery stores or roadside stalls [44.1% (95% CI: 39.4, 48.9)]. Nearly a third [29.7% (95% CI: 26.4, 33.2)] of them shared the cost of cigarettes with friends, while 17.9% (95% CI: 14.8, 21.5) got them from someone else. Similarly, most of the female current cigarette smokers either purchased cigarettes from supermarkets, grocery stores or roadside stalls [25.5% (95% CI: 15.0, 40.1)], got them from someone else [25.3% (95% CI: 13.4, 42.8)] or shared the cost of cigarettes with friends [15.9% (95% CI: 8.8, 27.0)] (**Table 3.9**).

More than half of the current cigarette smokers [52.1% (95% CI: 45.3, 58.7)] bought the cigarettes in a pack while 41.7% (95% CI: 35.4, 48.2) of them bought individual cigarette sticks. Only a small number of them bought traditional hand-rolled cigarettes [5.1% (95% CI: 3.2, 7.9)]. Among the males, 53.4% (95% CI: 46.9, 59.8) bought cigarettes in packs; while among females, 56.9% (95% CI: 35.0, 76.4)] bought individual cigarette sticks (**Table 3.10**).

Majority [71.6% (95% CI: 64.2, 77.9)] of the current cigarette smokers who bought cigarettes in packs spent less than RM9.00 per pack. Less than 10.0% [9.2% (95% CI: 6.0, 14.0)] spent RM17.00 or more per pack (**Table 3.11**).

3.3.5 Level of nicotine addiction among current cigarette smokers

The level of nicotine addiction was assessed using the Heaviness of Smoking Index (Kozlowski et al. 1994). Overall, around two in five current cigarette smokers [39.7%, (95% CI: 32.9, 47.0)] did not have nicotine dependence, with 40.9% (95% CI: 34.7, 47.4) males and 27.1% (95% CI: 11.9, 50.6) females (**Table 3.12**).

Approximately a third of current cigarette smokers had very low dependence [28.5% (95% CI: 22.9, 34.8)] or low to moderate dependence [(29.3% (95% CI: 22.6, 37.0)]. A similar trend was observed among males. However, more than half of females [52.7% (95% CI: 31.6, 72.8)] were found to have low to moderate dependence (**Table 3.12**).

The prevalence of current cigarette smokers with moderate dependence was 1.6% (CI: 0.8, 3.0) while those with high dependence was only 0.9% (95% CI: 0.5, 1.7) (**Table 3.12**).

3.3.6 Cessation among current cigarette smokers

Among the adolescents who were current cigarette smokers, three quarters of them wanted to stop smoking now [76.7%, (95% CI: 71.0, 81.5)]. 75.5% (95% CI: 69.6, 80.6) of male current cigarette smokers wanted to stop smoking now as compared with 89.1% (95% CI: 57.9, 98.0) of the female current cigarette smokers (**Table 3.13**).

Similarly, three quarters of current cigarette smokers had tried to stop smoking in the past twelve months [75.5% (95% CI: 69.7, 80.5)]. 74.5 % (95% CI: 68.4, 79.9) of the male adolescents and 85.7% (95% CI: 60.4, 95.9) of the female adolescents had tried to stop smoking in the past twelve months (**Table 3.13**).

Generally, adolescents who were current cigarette smokers seldom received help to stop smoking. Less than one third of the adolescents had ever received help from a professional (32.0%, 95% CI: 28.8, 35.4) or from a quit smoking programme in school (27.6%, 95% CI: 24.6, 31.0). Furthermore, approximately a quarter of the adolescents (24.2%, 95% CI: 20.8, 28.0) who smoked never received any help/ advice at all (**Table 3.13**).

3.4 Ever smoked cigarette

3.4.1 Prevalence of ever cigarette smokers

The prevalence of those who ever smoked a cigarette among the adolescents was 21.4% (95% CI: 19.2, 23.8) (**Table 3.14**). The prevalence was almost five times higher among males [35.1% (95% CI: 31.7, 38.7)] as compared to females [7.1% (95% CI: 5.7, 8.8)]. More adolescents from secondary schools had ever tried a cigarette [27.9% (95% CI: 25.3, 30.7)] as compared to those in primary schools [10.2% (95% CI: 8.2, 12.5)].

The prevalence of adolescents who ever smoked a cigarette was almost twice as much in rural areas [26.6% (95% CI: 23.4, 30.1)] as compared to those in urban areas [15.1% (95% CI: 13.0, 17.6)] (**Table 3.14**).

The three states with the highest prevalence of adolescents who ever smoked a cigarette were Perlis [29.2% (95% CI: 23.1, 36.1)], Sabah & WP Labuan [26.9% (95% CI: 20.0, 35.1)] and Kelantan [26.2% (95% CI: 19.6, 34.1)]; while the three states with the lowest prevalence were WP Kuala Lumpur [15.2% (95% CI: 10.1, 22.2)], Perak [17.0% (95% CI: 12.3, 22.9)] and Penang [17.3 % (95% CI: 11.1, 26.0)] (**Table 3.14**).

3.4.2 Age at which cigarette smoking was initiated among ever cigarette smokers

Overall, among those who had ever smoked a cigarette, 78.7% (95% CI: 75.0, 82.0) tried their first cigarette before the age of 14 (**Table 3.18**) and a third [33.1% (95% CI: 30.2, 36.1)] of them had their first cigarette at the age of 12 to 13. Similarly, among male adolescents, more than a third [34.8% (95% CI: 31.7, 38.1)] of them had their first cigarette at that age. Alarmingly, one in four females who had ever smoked a cigarette had their first cigarette at a tender age of 7 years or younger [25.1% (95% CI: 17.4, 34.7)] (**Table 3.19**).

3.5 Exposure to Second Hand Smoke (SHS)

Overall, [37.8% (95% CI: 35.8, 39.9)] of the adolescents were exposed to SHS at home and more than half of them [51.2%, (95% CI: 49.2, 53.2)] were exposed in public places in the past 7 days. There was no significant difference between the genders for SHS exposure (**Table 3.20**).

The adolescents reported that they had the highest SHS exposure in the highway Rest & Relax stop areas [30.3%, 95% CI: 28.6, 32.0], followed by inside public transport [26.9%, (95% CI: 25.1, 28.9)] and inside parents' / guardians' transport [23.3%, 95% CI: 21.6, 25.1] during the past 7 days (**Table 3.20**).

More than two thirds of the adolescents [69.0%, 95% CI: 66.7, 71.1] stated that they saw someone smoking outside the school compound in the last 30 days, while 27.3% (95% CI: 25.1, 29.5) claimed that they have seen someone smoking inside the school compound in the last 30 days. A higher percentage of males [31.9%, 95% CI: 29.2, 34.7)] compared to females [22.4%, 95% CI: 20.1, 24.9)] saw someone smoking inside the school compound (**Table 3.21**).

3.6 Media and advertising

Almost nine in ten [87.3 % (95% CI: 86.0, 88.5)] of all the adolescents had seen anti-tobacco advertisements in the past 12 months either on television, cinemas, internet or social media. The prevalence was higher among females [89.2 % (95% CI: 87.5, 90.7)] as compared to males [85.5 % (95% CI: 83.7, 87.1)]. Nearly half [48.0% (95% CI: 45.3, 50.8)] of those who attended sports events in the past 30 days had noticed anti-tobacco messages. Three quarters [76.1 % (95% CI: 74.0, 78.1)] of the adolescents were taught about the danger of smoking tobacco during the last school year (**Table 3.24**).

On the other hand, among the current cigarette smokers, 74.2% (95% CI: 69.9, 78.2) of them claimed that they were taught about the danger of smoking during the last school year. Almost 9 in 10 [89.6 % (95% CI: 87.0, 91.7)] of them had seen anti-tobacco advertisements in the past 12 months on television, cinemas and social media. Within the last 30 days, 50.2% (95% CI: 43.0, 57.4) of the current cigarette smokers who attended sports events had noticed anti-tobacco messages.

There was no significant difference in the prevalence between current cigarette smokers and never cigarette smokers (**Table 3.25**).

Brand stretching and promotion of tobacco products on merchandised items are still on-going and this current study showed that 4.7% (95% CI: 4.1, 5.5) of the adolescents owned t-shirts, pens and back packs with tobacco-related brands and logos on it. The percentage was higher among males [7.0% (95% CI: 5.9, 8.4)] as compared to females [2.4% (95% CI: 1.8, 3.0)]. Among non-tobacco users, 2.7% (95% CI: 2.2, 3.3) owned something that had a tobacco brand or logo on it. The percentage was almost 3 times higher among male non-tobacco users [4.4% (95% CI: 3.4, 5.7)] as compared to female non-tobacco users [1.5% (95% CI: 1.1, 2.0)] (**Table 3.27**).

In this study, the adolescents were also asked if they were ever offered free tobacco products from tobacco promoters. The findings showed that 2.5% (95% CI: 2.1, 2.9) of them were ever offered free tobacco products from tobacco promoters. The prevalence was significantly higher among males [3.7 % (95% CI: 3.1, 4.4)] as compared to females [1.2% (95% CI: 0.8, 1.7)]. There was a high percentage of adolescents [77.2% (95% CI: 75.5, 78.9)] who reported ever watching scenes or actions of people smoking on television shows, videos or movies in the last 30 days (**Table 3.28**).

Overall, 37.4% (95% CI: 35.8, 39.1) of the adolescents noticed advertisements or promotions on tobacco products at points of sale and 34.2% (95% CI: 32.5, 35.9) claimed that neither those advertisements nor promotions did attract their attention. Only 3.2% (95% CI: 2.8, 3.8) of them reported that they were attracted by those advertisements or promotions (**Table 3.28**).

About 4 out of 10 [40.7% (95% CI: 36.6, 45.0)] of the current cigarette smokers and 36.5% (95% CI: 34.4, 38.7) of those who never smoked noticed advertisements or promotions on any tobacco products at points of sale (**Table 3.29 and Table 3.30**). Among those who never smoked, 5.2% (95% CI: 3.9, 6.8) claimed that they were attracted by those advertisements or promotions (**Table 3.30**).

3.7 Knowledge and attitude towards smoking

Overall, four in five [80.4% (95% CI: 78.4, 82.2)] adolescents knew that smoking below the age of 18 is an offence under the law and there was no significant difference between males [78.4% (95% CI: 76.0, 80.5)] and females [82.4% (95% CI: 80.1, 84.5)]. Majority [70.9% (95% CI: 68.7, 73.0)] knew that it is an offence for underage adolescents to buy cigarettes; and the percentage was similar between males [69.4% (95% CI: 67.1, 71.6)] and females [75.2% (95% CI: 69.8, 75.1)]. In addition, majority [72.0% (95% CI: 70.2, 73.8)] of them knew that possessing cigarettes under the age of 18 is an offence under the law and it was significantly higher among female adolescents [74.7% (95% CI: 72.8, 76.6)] compared to male adolescents [69.4% (95% CI: 66.9, 71.9)] (**Table 3.31**).

Overall, majority of the adolescents [89.6% (95% CI: 88.0, 91.0)] knew that exposure to other people's cigarette smoke is harmful for their own health and it was significantly higher among females [92.7% (95% CI: 91.1, 94.0)] compared to males [86.7% (95% CI: 84.8, 88.4)]. More than four in five students [86.3% (95% CI: 84.3, 88.0)] favoured banning smoking inside enclosed public places (such as in shops, restaurants, buses, taxis, trains, school playgrounds, gymnasiums, sports centers and shopping malls). The percentage was higher among female adolescents [89.4% (95% CI: 87.5, 91.1)], compared to male adolescents [83.2% (95% CI: 80.9, 85.3)] (**Table 3.31**).

Almost a third [32.0% (95% CI: 30.6, 33.5)] of the adolescents thought that it is definitely difficult to quit once someone has started smoking tobacco whereas 17.7% (95% CI: 15.9, 19.6) thought that it is definitely not difficult to quit smoking. A higher prevalence of male adolescents [21.4% (95% CI: 19.3, 23.6)] thought that it is not difficult to quit smoking compared to the female adolescents [13.8% (95% CI: 11.9, 15.9)] (**Table 3.31**).

In addition, about [7.8% (95% CI: 6.9, 8.9)] of the adolescents thought that smoking tobacco helps people feel more comfortable during celebrations, parties or social gatherings. This perception was significantly higher among male adolescents [9.7% (95% CI: 8.4, 11.1)] compared to female adolescents [6.0% (95% CI: 5.0, 7.10)]. However, more than two thirds [67.0% (95% CI: 65.0, 69.0)] thought that smoking tobacco would make you feel less comfortable during celebrations, parties or social gatherings. A quarter [25.1% (95% CI: 23.6, 26.7)] of the adolescents thought that smoking tobacco does not make any difference during celebrations, parties or social gatherings (**Table 3.31**).

3.8 Susceptibility to initiate tobacco use in the future

Overall, 10.4% (95% CI: 9.1, 11.8) of the adolescents who had never used tobacco products were susceptible to tobacco use in the future. This was more significant among males [14.4%, (95% CI: 12.6, 16.5)] as compared to females [7.6% (95% CI: 6.4, 9.1)]. Overall, 2.2% (95% CI: 1.7, 3.0) of non-smoking adolescents thought they might enjoy smoking a cigarette (**Table 3.33**).

3.9 Conclusion

The prevalence of current tobacco smokers among Malaysian adolescents is quite high at 14.2% with more than one in ten 11.7% being current cigarette smokers. The prevalence of current cigarette smokers among adolescents aged 13-15 years was 14.8%. This is comparatively lower than the prevalence found by the Global Youth Tobacco Survey in 2009, which was 18.2%.

Majority of the adolescents who were current cigarette smokers had no or low nicotine dependence and three quarters of them wanted to quit smoking. Nearly all adolescents knew that smoking is harmful to their health. Nonetheless, one in ten non-smoking adolescents was susceptible to start smoking in the future. Many were still exposed to cigarette smoke at home and in public places. Four in five of them supported banning smoking inside enclosed public places.

E-CIGARETTE / VAPE USE

4. E-CIGARETTE/VAPE USE

Key findings

- The prevalence of current e-cigarette/vape users among Malaysian adolescents aged 10-19 years was 9.1% while the prevalence of ever e-cigarette/vape users was 19.1%.
- The prevalence of current e- cigarette/vape users among Malaysian adolescents aged 13-15 years was 11.3%.
- 46.5% of ever e-cigarette/vape users tried their first e-cigarette/vape before the age of 14 years.
- The prevalence of current dual users (e-cigarettes/vape and cigarettes) was 5.2%.
- 46.1% of current dual users started with cigarette smoking first.
- Only 10.0% of current dual users started with e-cigarette/vape.
- 37.5% of current e-cigarette/vape users knew that their e-cigarette/vape contained nicotine.
- 67.5% of current e-cigarette/vape users wanted to quit immediately while 71.6% tried to quit in the past 12 months.
- 41.4% of all adolescents felt that e-cigarette/vape was equally harmful as cigarette smoking.

4.1 Introduction

An electronic cigarette (e-cigarette) is a handheld electronic device designed to deliver aerosol by vapourising flavoured liquid containing nicotine, glycerol or propylene glycol which users would inhale into the respiratory system¹. The use of e-cigarettes has gained popularity worldwide since its introduction in the early 2000's². E-cigarettes have been claimed to be less harmful than cigarette smoking and as an effective alternative or aid to quit cigarette smoking³. However, studies on the efficacy of e-cigarettes in smoking cessation are inconsistent².

In Malaysia, the prevalence of e-cigarette use among adults aged 15 years and older in 2011 was 0.8%⁴. However, the prevalence of smokeless tobacco (including e-cigarettes) among adults aged 15 years and older was 10.9% in 2015⁵. At present, there is no nationally representative study on the use of e-cigarettes/ vape among Malaysian adolescents. The objectives of this study were to determine the prevalence of e-cigarette/vape users among Malaysian adolescents, to assess student related knowledge and behaviour towards e-cigarette/vape usage and to determine the prevalence of dual users (tobacco smoking and e-cigarette/vape usage)

4.2 Current e-cigarette/vape users

4.2.1 Prevalence of current e-cigarette/vape users

This survey found that 9.1% (95% CI: 7.7, 10.7) of the adolescents were current users of e-cigarettes/vape. More male adolescents [16.0% (95% CI: 13.8, 18.5)] were current e-cigarettes/vape users compared to female adolescents [2.8% (95% CI: 1.9, 4.0)]. The highest prevalence of current e-cigarette/vape usage was among adolescents from Negeri Sembilan [13.1% (95% CI: 9.3 18.1)], followed by Perlis [12.7% (95% CI: 8.2, 19.2)] (**Table 4.1**).

The overall prevalence of current e-cigarettes/vape users was highest among the 16 – 19 year olds [13.0% (95% CI: 10.2, 16.4)]) and lowest among adolescents aged 12 years or younger [4.8% (95% CI: 3.6, 6.4)] (**Table 4.2**).

4.2.2 Pattern of current e-cigarettes/vape usage in the last 30 days

Overall, 47.8% (95% CI: 43.3, 52.3) of the current users used e-cigarettes/vape for 1-2 days followed by 3- 5 days [23.0% (95% CI: 19.6, 26.9)] and 6-9 days [9.6% (95% CI: 7.4, 12.4)]. Similarly, about half of the male adolescents [45.3% (95% CI: 40.5, 50.2)] used e-cigarettes/vape for 1-2 days and 3-5 days [24.0% (95% CI: 20.1-28.3)]. A similar pattern of e-cigarettes/vape usage was observed among female adolescents, that is 1-2 days [61.4% (95% CI: 49.6, 71.9)] and 3-5 days [18.1% (95% CI: 11.8, 26.7)] (**Table 4.3**).

4.2.3 Frequency of e-cigarettes/vape usage in a typical day in the last 30 days

Overall, two in five adolescents [40.9% (95% CI: 36.9, 45.0)] used e-cigarettes/vape once a day and one in three adolescents [33.9% (95% CI: 30.2, 37.8)] used it 2-5 times a day. Among the male adolescents, the prevalence of using e-cigarettes/vape once a day and 2-5 times a day was 39.4% (95% CI: 35.1, 43.8) and 34.0% (95% CI: 30.0, 38.2) respectively. Among the female adolescents, the prevalence of using e-cigarettes/vape once a day and 2-5 times a day was 47.7% (95% CI: 37.9, 57.8) and 33.6% (95% CI: 22.6, 46.6) respectively (**Table 4.4**).

4.2.4 Cessation indicators among current e-cigarette/vape users

Overall, among the current e-cigarette/vape users, 67.5% (95% CI: 59.3, 74.7) wanted to quit immediately, 71.6% (95% CI: 64.2, 78.0) tried to quit in the past 12 months and 80.8% (95% CI: 75.6, 85.2) of them thought that they would be able to stop if they wanted to.

Among the adolescents, 24.2% (95% CI: 19.1, 30.1) had ever received help or advice from a programme or from a professional, 19.2% (95% CI: 15.1, 24.2) received help/advice from anti-smoking programmes in school and only 4.9% (95% CI: 3.2, 7.5) received help/advice from clinics or hospitals to quit smoking (**Table 4.5**).

4.2.5 Sources for obtaining e-cigarettes/vape among current users

Among the current e-cigarette/vape users, most of them obtained their e-cigarettes/vape from friends [43.3% (95% CI 38.5, 48.2)], followed purchasing them from shops/kiosks/shopping malls [17.5%

(95% CI: 14.3, 21.1)] and 15.0% (95% CI: 12.0, 18.6) got it from someone else. A similar pattern was observed among male adolescents. However, among female users, 19.6% (95% CI: 11.8, 30.7) obtained the e-cigarettes/vape from family members as compared to 10.3% (95% CI: 8.1, 13.1) of the male adolescents (**Table 4.6**).

4.2.6 Accessibility of e-cigarettes/vape

Overall, more than half [53.2% (95% CI: 48.7, 57.7)] of the adolescents aged below 18 years were not prevented from buying the e-cigarettes/vape. More than half of the male adolescents [52.7% (95% CI: 47.4, 57.9)] and female adolescents [56.4% (95% CI: 46.8, 65.5)] who were current e-cigarette/vape users were not prevented from buying e-cigarettes/vape because of their age.

4.2.7 Estimated cost of e-cigarettes/vape per month among current e-cigarette/vape users

Among the current e-cigarette/vape users, 34.9% (95% CI: 29.9, 40.2) had never bought any e-cigarettes/vape while 23.9% (95% CI: 20.2, 28.0) spent less than RM50.00 per month (**Table 4.7**).

4.3 Prevalence of current single users (e-cigarettes/vape/cigarettes) and dual users (e-cigarettes/vape and cigarettes)

The prevalence of current dual users was 5.2% (95% CI: 4.1, 6.5) whereas the prevalence of current single users was 3.9 % (95% CI: 3.3, 4.7) (**Table 4.8**).

Among the current dual users, almost half of them started with cigarettes [46.1% (95% CI: 38.5, 53.8)], while 10.0 % (95% CI: 6.6, 14.8) started with e-cigarettes/vape (**Table 4.9**).

4.4 Types of e-cigarettes/vape last used among e-cigarette/vape users

Approximately, one third of the adolescents (33.7%, 95% CI: 29.9, 37.8) who ever used e-cigarettes/vape used the modular system/Vape-MODS and 1 in 10 [13.4% (95% CI: 11.2, 16.0)] used disposable e-cigarettes. A similar pattern was observed among male students. However, among the female adolescents, 29.1% (95% CI: 19.4, 41.2) used a rechargeable e-cigarette kit containing a refillable liquid (**Table 4.10**).

Similar to the ever users, 34.6% (95% CI: 29.3, 40.4) of the current e-cigarette/vape users used the modular system/ Vape-MODS and 11.0% (95% CI: 8.8, 13.7) used disposable e-cigarettes and the female adolescents used a rechargeable e-cigarette kit containing a refillable liquid [36.6% (95% CI: 22.2, 53.8)] (**Table 4.11**).

4.5 Nicotine content in e-cigarettes/vape as reported by ever and current e-cigarette/vape users

Among the ever e-cigarette/vape users, 45.0% (95% CI: 41.5, 48.6) of them were not sure whether the e-cigarette/vape they were using contained nicotine or not. 32.1% (95% CI: 29.0, 35.5) said that their e-cigarettes/vape contained nicotine whereas 22.8% (95% CI: 19.6, 26.4) said that it did not contain nicotine (**Table 4.12**).

While among the current e-cigarettes/vape users, 38.6% (95% CI: 33.9, 43.6) of them were not sure whether the e-cigarette/vape they were using contained nicotine or not. 37.5% (95% CI: 32.8, 42.6) said that their e-cigarettes/vape contained nicotine whereas 23.8% (95% CI: 20.1, 28.0) said that it did not contain nicotine (**Table 4.13**).

4.6 Ever e-cigarette/vape users

4.6.1 Prevalence of ever heard of e-cigarettes/vape

Overall, 87.1% (95% CI: 85.4, 88.7) of the adolescents had ever heard of e-cigarettes/vape. Almost nine in ten [87.1% (95% CI: 85.2, 88.7)] male adolescents and 87.2%, (95% CI: 85.1, 89.1) of female adolescents had ever heard of e-cigarettes/vape. The highest prevalence of ever having heard of e-cigarettes/vape was among those from WP Putrajaya [92.5% (95% CI: 88.0, 95.4)], followed by Pahang [92.4% (95% CI: 86.6, 95.8)] and Melaka [92.2% (95%CI: 84.7, 96.2)]. The lowest prevalence of ever heard of e-cigarettes/vape was among adolescents from Penang [76.8% (95% CI: 66.0, 85.0)] (**Table 4.14**).

4.6.2 Prevalence of ever e-cigarette/vape users

This study showed that 19.1% (95% CI: 17.4, 21.0) of the adolescents had ever tried using e-cigarettes/vape. Male adolescents [29.5% (95% CI: 26.8, 32.4)] were almost four times more than female adolescents [8.3% (95% CI: 6.8, 10.0)] to have ever tried using e-cigarettes/vape. The highest prevalence of ever tried using e-cigarettes/vape was among those from Negeri Sembilan [24.7% (95% CI: 19.6, 30.6)], followed by Perlis [21.6% (95% CI: 16.8, 27.4)] and Sabah & WP Labuan [20.7% (95% CI: 15.5, 27.1)]. The lowest prevalence of ever tried using e-cigarettes/vape was among adolescents from Terengganu [16.0% (95% CI: 12.0, 21.1)] (**Table 4.15**).

The overall prevalence of ever tried using e-cigarettes/vape was highest among the 16 – 19 year olds [27.1% (95% CI: 24.2, 30.2)] followed by the 13 – 19 year olds [(24.4% (95% CI: 22.4, 26.4)]. The lowest prevalence was found among adolescents aged 12 years or younger at [10.3% (95% CI: 8.4, 12.5)]. Similar patterns of ever tried using e-cigarettes/vape were observed among male and female adolescents (**Table 4.16**).

4.6.3 Initiation age of e-cigarettes/vape usage among ever e-cigarette/vape users

Overall, 36.9% (95% CI: 30.4, 44.0) of the adolescents started using e-cigarettes/vape at the age of 14-15 years, followed by 12-13 years [25.2% (95% CI: 20.0, 31.2)] and 16 years and above [16.5% (95% CI: 12.5, 21.6) (**Table 4.17**).

4.6.4 Prevalence of ever e-cigarette/vape users who first tried a conventional cigarette before the age of 14 years

Overall, 46.5% (95% CI: 39.8, 53.4) of ever e-cigarette/vape users first tried a conventional cigarette before the age of 14. The prevalence among male and female adolescents were 46.3 % (95% CI: 39.8, 53.3) and 47.8% (95% CI: 35.8, 60.0) respectively (**Table 4.18**).

4.6.5 Reasons to start using e cigarettes/vape among ever users

Among ever e-cigarette/vape users, 77.3% (95% CI: 73.9, 80.3) of the adolescents liked the taste and smell of e cigarettes/vape, 63.8% (95% CI: 59.8, 67.7) wanted to experiment with them while 63.6% (95% CI: 60.3, 66.8) stated that e-cigarettes/vape was safer than tobacco cigarettes. Among females who were ever e-cigarette/vape users, the reasons to start using e-cigarettes/vape were liking the taste and smell [70.7% (95% CI: 61.5, 78.5)], followed by popularity [65.7% (95% CI: 56.6, 73.7)] and wanting to experiment with them [64.3% (95% CI: 55.5, 72.2)] (Table 4.19).

4.7 Ever read about danger of e-cigarettes/vape on posters or pamphlets

Overall, 58.9% (95% CI: 57.1, 60.7) of the adolescents had ever read any posters or pamphlets on the dangers of e-cigarette/vape usage in the past 12 months. More female adolescents [61.8% (95% CI: 59.4, 64.1)] had ever read any posters or pamphlets on the dangers of e-cigarette/vape usage in the past 12 months compared to male adolescents [56.1% (95% CI: 54.0, 58.1)].

4.8 Commercial promotion of e-cigarettes/vape

Overall, 10.6% (95% CI: 9.5, 11.9) of the adolescents had been offered a free trial session of e-cigarettes/vape and 7.9% (95% CI: 6.9, 9.0) had been offered free e-cigarettes/vape liquid by vendors. More male adolescents [16.4% (95% CI: 14.5, 18.5)] were offered a free trial session for e-cigarettes/vape as compared to female adolescents [4.8% (95% CI: 3.9, 5.8)]. Similarly, more male adolescents [11.6% (95% CI: 9.9, 13.4)] were offered free e-cigarette/vape liquid (e-liquid) as compared to female adolescents [4.2% (95% CI: 3.5, 5.0)] (Table 4.20).

4.9 Perception towards e-cigarettes/vape usage

Overall, 11.9% (95% CI: 10.4, 13.6) of the adolescents who were non users thought they might enjoy using e-cigarettes/vape. More male adolescents [18.3% (95% CI: 16.0, 20.9)] thought that they would enjoy using e-cigarettes/vape as compared to female adolescents [5.2% (95% CI: 4.3, 6.4)].

Among all the adolescents, 41.4% (95% CI: 39.6, 43.1) felt that e-cigarette/vape use was equally harmful as cigarette smoking, 39.5% (95% CI: 37.6, 41.5) felt that it was more harmful compared to cigarette smoking and 19.1% (95% CI: 17.9, 20.4) felt that it was less harmful compared to cigarette smoking (Table 4.21).

It was found that the perception about the harmfulness of e-cigarettes/vape compared to cigarette smoking was different among males and females. The prevalence of male adolescents who felt that e-cigarette/vape usage was equally harmful [37.2% (95% CI: 35.2, 39.2)] and more harmful [37.9% (95% CI: 35.9, 40.1)] compared to cigarette smoking was similar. On the other hand, almost half of the female adolescents [45.7% (95% CI: 43.3, 48.1)] felt e-cigarette/vape usage was equally harmful as cigarette smoking, 41.2% (95% CI: 38.5, 43.9) felt that it was more harmful compared to cigarette smoking and only 13.1% (95% CI: 11.8, 14.6) felt that it was less harmful compared to cigarette smoking (Table 4.21).

Among the current e-cigarette/vape users, 38.5% (95% CI: 34.2, 43.0) felt that e-cigarette/vape usage was equally harmful as cigarette smoking, 35.6% (95% CI: 30.5, 41.0) felt that it was less harmful compared to cigarette smoking and 25.9% (95% CI: 22.5, 29.6) felt that it was more harmful compared to cigarette smoking (Table 4.22).

4.10 Susceptibility to initiate e-cigarette/vape use among non e-cigarette/vape users

Overall, 28.0% (95% CI: 25.9, 30.2)] of the non-users thought that they might use e-cigarettes/ vape use in the future. This was higher among male adolescents [39.8% (95% CI: 37.0, 42.7)] compared to female adolescents [15.7% (95% CI: 13.8, 17.8)].

4.11 Conclusion

The findings of the e-cigarette/vape module showed that the prevalence of ever e-cigarette/vape users was 19.1% while the prevalence of current e-cigarette/vape users was 9.1%. The prevalence was higher among male adolescents compared to female adolescent for both ever and current e-cigarette/ vape users. It was found that 46.5% of ever e-cigarette/vape users tried their first e-cigarette/vape before the age of 14. The prevalence of current dual users of e-cigarettes/vape and cigarettes was 5.4%. Out of which, 10.8% of them started with e-cigarettes/vape before cigarettes. Almost three quarters (67.5%) of the current e- cigarette/vape users wanted to quit immediately while 71.6% tried to quit in the past 12 months. Less than half (41.4%) of all the adolescents felt that e-cigarettes/ vape was equally harmful as cigarette smoking. Alarmingly, more than half (53.2%) of the current users who were below 18 years were not prevented from buying the e-cigarettes/vape.

SHISHA USE

5. SHISHA USE

Key findings

- The prevalence of current shisha smokers was 3.5% while the prevalence of ever shisha smokers was 10.6%.
- The prevalence of current shisha smokers among adolescents aged 13-15 years old was 4.6%.
- 51.2% of ever shisha smokers tried their first shisha before the age of 14 years.

Definition:

The definition for ever shisha smokers among adolescents is based on those who answered yes to the question “Have you ever tried or experimented with shisha smoking, even one or two puffs?” A current shisha smoker is defined as an adolescent who had answered ‘1 or more days’ to the question, “During the past 30 days (one month), on how many days did you smoke shisha?”

5.1 Introduction

Waterpipe shisha, also known as hookah, is one of the various smoked tobacco products. It was originated and invented in India as a cigarette substitute or a less harmful method of tobacco usage¹; It is now available in many countries across the globe with an estimated 100 million users. Factors for its popularity include easy availability, attractive designs and flavoured aromatic tobacco and misconceptions regarding its use².

5.2 Prevalence of current shisha smokers

A total of 3.5% (95%CI: 2.8, 4.3) of the adolescents were current shisha smokers. The prevalence of male adolescents [5.5% (95%CI: 4.4, 6.8)] was significantly higher than female adolescents [1.4% (95%CI: 0.9, 2.1)]. The prevalence of current shisha smokers was significantly higher among secondary school adolescents [4.5% (95%CI: 3.5, 5.6)] as compared to primary school adolescents [1.8% (95%CI: 1.3, 2.6)] (**Table 5.1**).

By age group, the highest prevalence of current shisha smokers was among the 13-15 year olds [4.6% (95%CI: 3.4, 6.4)]. The highest prevalence of current shisha smokers among male adolescents was among the 16-19 year old age group [7.7% (95%CI: 6.0, 9.7)] (**Table 5.2**).

Majority of the current shisha smokers smoked 1-2 days per month [61.2% (95% CI: 53.9, 68.0)]. The trend was similar for both male [61.8% (95% CI: 54.0, 69.0)] and female adolescents [58.7% (95% CI: 41.3, 74.2)] (**Table 5.3**).

5.3 Prevalence of ever shisha smokers

The overall prevalence of ever shisha smokers was 10.6% (95% CI: 9.5, 11.8). More male adolescents [15.3% (95% CI: 13.5, 17.3)] were ever shisha smokers compared to female adolescents [5.7% (95% CI: 4.9, 6.6)]. The prevalence of ever shisha smokers was significantly higher among

secondary school students [13.0% (95% CI: 11.6, 14.5)] as compared to primary school students [6.5% (95% CI: 5.4, 7.8)]. By age group, the highest prevalence of ever shisha smokers was among the 16-19 year old adolescents [15.3% (95%CI: 13.3, 17.4)] (**Table 5.4**).

More than one third, 36.3% (95% CI: 29.2,44.0) of ever shisha smokers initiated smoking at the age 14-15 years old, followed by those aged 12-13 years old [20.0% (95% CI: 15.4, 25.6)] (**Table 5.6**).

More than half of ever shisha smokers [51.2% (95% CI: 43.2, 59.1)] initiated shisha smoking before the age of 14. Similarly, more than half of both male and female students initiated shisha smoking before the age of 14 (**Table 5.7**).

5.4 Conclusion

The findings of the shisha module showed that the prevalence of ever shisha smokers was 10.6% while the prevalence of current shisha smokers was 3.5%. Both were higher among males compared to females. It was found that, 51.2% of those who ever tried shisha did so before the age of 14.

RECOMMENDATIONS

6. RECOMMENDATIONS

Smoking prevalence among Malaysian adolescents is still quite high with a young smoking initiation age. It is apparent that smoking is still appealing to some Malaysian adolescents. Studies have shown that younger smoking initiation will lead to stronger nicotine addiction and it reduces the success rate of quitting.

It is imperative that smokefree advocacy towards Malaysian youth should be continued and strengthened. School based programmes, community based programmes and national based programmes must reinforce the message that smoking is harmful and Malaysian youth should stay away from initiating smoking or breathing in tobacco smoke. Smokefree advocacy should be instilled anywhere possible such as during physical education, art lessons, science lessons, civic or religious lessons, or at any opportunity available.

This study showed that rural adolescent males are at a higher risk of trying cigarettes. Perhaps smokefree advocacy programmes should be accentuated more in the rural areas. Rural community programmes such as KOSPEN could be tapped to disseminate anti-smoking messages among rural school children.

Intervention for young smokers should also be given priority as it is easier to treat a new addiction rather than an established adult chain smoker. School counselors could play an important role in helping young smokers to quit smoking and they should be equipped with proper guidelines and training on how to help the school going children who are smokers. Essential intervention programmes such as KOTAK (Kesihatan Oral Tanpa Asap Rokok) by the dental services must be supported by all quarters. Parents must also play a role in discouraging their children from smoking.

Now there is a new form of nicotine delivery which is through electronic devices. This study showed that most students have heard about electronic cigarettes / vape and one in five have even tried it. The technology is rapidly changing while the objective remains the same, which is to develop nicotine addiction among its users. Smokefree advocacy must depict our children with the (known and unknown) dangers of using electronic cigarettes/ vape. These products should be made illegal for underage users, whether they contain nicotine or not.

The overall implementation of the WHO Framework Convention on Tobacco Control MPOWER strategies must also be strengthened. Mass media campaigns on smokefree must be unremitting and supported, not only by the government, but also by non-governmental associations, communities and corporations. Total display ban at points of sale must be considered as it reduces the environmental influence on young smokers. Cigarette prices should be increased further through higher tobacco taxation to further reduce affordability for students. Where possible, a demerit system for students who smoke should be implemented which will discourage them from smoking.

In summary, smokefree advocacy must be reinforced from all possible angles and intervention for young smokers should be strengthened so that all forms of smoking among Malaysian adolescents can be reduced further to achieve the Endgame of Tobacco for Malaysia.

PENGENALAN

Kementerian Kesihatan Malaysia dengan kerjasama Kementerian Pelajaran Malaysia sedang menjalankan tinjauan yang berkaitan penggunaan rokok & rokok elektronik di kalangan remaja. Terima kasih kerana bersetuju untuk menyertai tinjauan ini. Tiada jawapan yang BETUL atau SALAH. Markah peperiksaan anda tidak akan terjejas sekiranya anda menjawab atau tidak menjawab soalan dalam survei ini. Setiap jawapan yang anda berikan boleh membantu memantapkan program kesihatan untuk remaja. Oleh itu, sila jawab dengan ikhlas dan tepat. Segala maklumat individu yang diberikan adalah RAHSIA kerana TIADA MAKLUMAT PENGENALAN DIRI DIAMBIL. Tiada siapa akan tahu bagaimana anda menjawab. Sila jawab berdasarkan apa yang anda tahu.

INTRODUCTION

The Ministry of Health Malaysia with the cooperation of the Ministry of Education Malaysia is conducting a survey on tobacco & e-cigarette usage among adolescents. Thank you for agreeing to participate in this survey. There are no CORRECT or WRONG answers. None of your grades or marks will be affected whether or not you answer the questions. Each answer that you provide will help in the improvisation of health programs for adolescent. Therefore, please answer as honestly and accurately as possible. All individual information given will be kept CONFIDENTIAL because NO IDENTIFIERS ARE TAKEN. No one will know how you answer. Answer the questions based on your best of knowledge.

PANDUAN MENGISI BORANG (SILA BACA DENGAN TELITI)

- a. JANGAN tulis NAMA ANDA pada kertas soalan mahupun kertas jawapan
- b. Sila BACA PENYATAAN untuk soalan yang memberikan penyataan atau definisi sebelum menjawab soalan.
- c. Sila HITAMKAN jawapan yang bersamaan jawapan anda pada kertas jawapan yang disediakan. Hanya hitamkan SATU JAWAPAN bagi setiap soalan **kecuali jika ada arahan untuk boleh pilih lebih dari satu jawapan**. Sila gunakan pensel 2B yang disediakan. Sekiranya lengkap, ikut arahan pegawai yang melakukan survei di sekolah/kelas anda.

GUIDE ON FILLING THE QUESTIONNAIRE (PLEASE READ CAREFULLY)

- a. DO NOT write YOUR NAME on the questionnaire or the answer sheet.
- b. Please READ STATEMENT for question with a preceding statement or definitions before answering.
- c. Please FILL IN THE CIRCLES on your answer sheet that matches your answer.
There can be ONLY ONE ANSWER for each question **unless stated in the questionnaire**. Use only the 2B pencil provided. When you have finished answering, follow the instructions of the person conducting the survey in your school/class.

 - h. 30 hari / **All 30 days**
9. Dalam tempoh 30 hari (satu bulan) yang lepas, **KEBIASAANNYA** berapa batang rokok anda hisap pada hari-hari anda merokok? / **During the past 30 days (one month), how many cigarettes did you USUALLY smoke on the days you smoke?**
- a. Saya tidak merokok sepanjang 30 hari yang lepas / **I did not smoke cigarettes during the past 30 days**
 - b. Kurang daripada 1 batang rokok sehari / **Less than 1 cigarette per day**

- c. 1 batang rokok sehari / 1 cigarette per day
 - d. 2 hingga 5 batang rokok sehari / 2 to 5 cigarettes per day
 - e. 6 hingga 10 batang rokok sehari / 6 to 10 cigarettes per day
 - f. 11 hingga 20 batang rokok sehari / 11 to 20 cigarettes per day
 - g. 21 hingga 30 batang rokok sehari / 21 to 30 cigarettes per day
 - h. Lebih dari 30 batang rokok sehari / More than 30 cigarettes per day

10. Pada kali terakhir anda membeli rokok dalam **tempoh 30 hari yang lepas**, bagaimanakah anda membeli rokok tersebut? / The last time you bought cigarettes during the **past 30 days**, how did you buy them?

 - a. Saya tidak membeli rokok sepanjang 30 hari yang lepas / I did not buy cigarettes during the past 30 days
 - b. Saya membeli rokok secara kotak / I bought them in a pack
 - c. Saya membeli rokok secara ceraian atau sebatang / I bought individual sticks (single sticks)
 - d. Saya membeli rokok daun / I bought traditional hand-rolled cigarette
 - e. Saya membeli tembakau dan gulung sendiri dengan kertas rokok / I bought tobacco and rolled my own with cigarette paper

11. **Jika anda membeli rokok secara kotak**, berapakah jumlah wang yang anda telah belanja pada kali terakhir anda membeli rokok sebelum ini? / If you bought cigarettes in pack, how much does it cost you the last time you bought them ?

 - a. Saya tidak membeli rokok / I did not buy cigarettes
 - b. Saya tidak membeli rokok secara kotak / I did not buy cigarettes in pack
 - c. Kurang dari RM9.00 sekotak / less than RM9.00 a pack
 - d. RM9.00 hingga RM11.90 sekotak / RM9.00 until RM11.90 a pack
 - e. RM12.00 hingga RM15.40 / RM12.00 until RM15.40
 - f. RM15.50 hingga RM16.90 / RM15.50 until RM16.90
 - g. RM17.00 dan ke atas / RM17.00 or more

12. Pernahkah anda mencuba atau menggunakan mana-mana produk seperti di bawah? / Have you ever tried or experimented with any of the products listed below?

 - i. Shisha / Shisha
 - a) Ya / Yes
 - b) Tidak / No
 - ii. Rokok Daun / Traditional hand-rolled cigarette
 - a) Ya / Yes
 - b) Tidak / No
 - iii. Rokok gulung sendiri dengan kertas rokok / ‘Roll-your-own’ with cigarette paper
 - a) Ya / Yes
 - b) Tidak / No
 - iv. Cerut / Cigar
 - a) Ya / Yes
 - b) Tidak / No
 - v. Hisap paip / Pipe smoking
 - a) Ya / Yes
 - b) Tidak / No

- vi. Rokok elektronik atau vape / E- cigarette or vape
a) Ya / Yes
b) Tidak / No
- vii. Mengunyah tembakau (Sentil atau Songel) / Chewing tobacco
a) Ya / Yes
b) Tidak / No
- viii. Menghidu tembakau / Snuff
a) Ya / Yes
b) Tidak / No
13. Dalam tempoh 30 hari (satu bulan) yang lepas, adakah anda menggunakan mana- mana produk seperti di bawah? / During the past 30 days (one month), did you use any of the products listed below?
i. Shisha / Shisha a) Ya / Yes
 b) Tidak / No
- ii. Rokok daun / Traditional hand-rolled cigarette
a) Ya / Yes
b) Tidak / No
- iii. Rokok gulung sendiri dengan kertas rokok / 'Roll-your-own' with cigarette paper
a) Ya / Yes
b) Tidak / No
- iv. Cerut / Cigar a) Ya / Yes
 b) Tidak / No
- v. Hisap paip / Pipe smoking
a) Ya / Yes
b) Tidak / No
- vi. Rokok elektronik atau vape / E- cigarette or vape
a) Ya / Yes
b) Tidak / No
- vii. Mengunyah tembakau (Sentil atau songel) / Chewing tobacco
a) Ya / Yes
b) Tidak / No
- viii. Menghidu tembakau / Snuff
a) Ya / Yes
b) Tidak / No
14. **Kebiasaan**, bilakah anda akan menghisap rokok pertama anda selepas anda bangun dari tidur? / How soon after you wake up do you usually have your first smoke?

- a. Saya tidak pernah merokok / I never smoke tobacco
- b. Dalam masa 5 minit / Within 5 minutes
- c. 6 hingga 30 minit / 6 to 30 minutes
- d. 31 hingga 60 minit / 31 to 60 minutes
- e. Lebih dari 60 minit / More than 60 minutes

SOALAN BERIKUT ADALAH BERKAITAN DENGAN SIKAP ANDA UNTUK BERHENTI MEROKOK.

THE NEXT QUESTIONS ASK ABOUT YOUR ATTITUDES TOWARDS STOPPING SMOKING.

- 15. Adakah anda ingin berhenti merokok sekarang? / Do you want to stop smoking now?
 - a. Saya tidak pernah merokok / I have never smoked
 - b. Saya tidak merokok lagi / I no longer smoke
 - c. Ya / Yes
 - d. Tidak / No
- 16. Dalam tempoh 12 bulan yang lalu, pernahkah anda cuba untuk berhenti merokok? / During the past 12 months, did you ever try to stop smoking?
 - a. Saya tidak pernah merokok / I have never smoked
 - b. Saya tidak merokok semenjak 12 bulan lalu / I did not smoke during the past 12 months
 - c. Ya / Yes
 - d. Tidak / No
- 17. Pada fikiran anda, adakah anda boleh berhenti merokok sekiranya anda **mahu berhenti?** / Do you think you would be able to stop smoking if you want to?
 - a. Saya tidak pernah merokok / I have never smoked
 - b. Saya telah berhenti merokok / I have stopped smoking
 - c. Ya / Yes
 - d. Tidak / No
- 18. Pernahkah anda **menerima bantuan atau nasihat** untuk berhenti merokok? / Have you ever received help or advice to stop smoking
 - a. Saya tidak pernah merokok / I have never smoked
 - b. Tidak, saya tidak pernah menerima sebarang bantuan atau nasihat untuk berhenti merokok / No, I have never received help or advice to stop smoking
 - c. Ya, daripada program berhenti merokok di sekolah / Yes, from a quit smoking program at school
 - d. Ya, daripada perkhidmatan berhenti merokok di klinik / hospital / Yes, from a quit smoking program at clinic / hospital
 - e. Ya, daripada rakan-rakan / Yes, from friends
 - f. Ya, daripada ahli keluarga / Yes, from family members
 - g. Ya, daripada semua sumber di atas / Yes, from all the above sources
 - h. Ya, daripada sumber-sumber lain / Yes, from other sources

SOALAN BERIKUT ADALAH BERKAITAN DENGAN PENDEDAHAN ASAP ROKOK ORANG LAIN TERHADAP ANDA.

THE FOLLOWING QUESTIONS ARE RELATED TO CIGARETTE SMOKE EXPOSURE FROM OTHERS TO YOU

19. **Dalam tempoh 7 hari yang lalu**, berapa hari seseorang merokok di dalam rumah anda semasa anda berada di dalam rumah? / During the past 7 days, on how many days has anyone smoked inside your home, in your presence?
- 0 hari / 0 day
 - 1 hingga 2 hari / 1 - 2 days
 - 3 hingga 4 hari / 3 - 4 days
 - 5 hingga 6 hari / 5 - 6 days
 - 7 hari / 7 days
20. **Dalam tempoh 7 hari yang lalu**, berapa hari anda terdedah kepada asap rokok orang lain di tempat selain daripada rumah anda? / During the past 7 days, on how many days have you exposed to cigarette smoke from other people in places other than your house?
- 0 hari / 0 day
 - 1 hingga 2 hari / 1 - 2 days
 - 3 hingga 4 hari / 3 - 4 days
 - 5 hingga 6 hari / 5 - 6 days
 - 7 hari / 7 days
21. **Dalam tempoh 7 hari yang lalu**, adakah anda terdedah kepada asap rokok di tempat-tempat yang berikut? / During the past 7 days, have you been exposed to cigarette smoke in places listed below?
- Di dalam pusat hiburan seperti wayang, pusat karaoke, tempat permainan video / Inside entertainment centre such as cinema, karaoke centre, game arcades
 - Ya / Yes
 - Tidak / No
 - Di dalam kendaraan awam (cth: bas, taxi, keretapi) / Inside public transports (eg: bus, taxi, train)
 - Ya / Yes
 - Tidak / No
 - Di hentian pengangkutan awam / In public transport station
 - Ya / Yes
 - Tidak / No
 - Di dalam sekolah, kolej atau universiti / Inside school, college, or university
 - Ya / Yes
 - Tidak / No
 - Di dalam bas sekolah / Inside school bus
 - Ya / Yes
 - Tidak / No
 - Di dalam kompleks membeli-belah / Inside shopping complexes
 - Ya / Yes
 - Tidak / No
 - Di dalam stadium sukan, kompleks sukan atau gimnasium / Inside sports stadium , sports complexes, or gymnasium
 - Ya / Yes
 - Tidak / No

- viii. Di dalam kenderaan ibu-bapa, penjaga / Inside your parent's / guardian's transport
a) Ya / Yes
b) Tidak / No
- ix. Di kawasan rehat dan rawat (R&R) di lebuhraya / In R&R area in highway
a) Ya / Yes
b) Tidak / No
22. Dalam tempoh 30 hari yang lalu, pernahkah anda melihat orang lain merokok di tempat-tempat berikut ? / During the past 30 days, have you ever seen anyone smoked in the following places?
i. Di dalam kawasan sekolah / Inside school compound
a) Ya / Yes
b) Tidak / No

- a. Sangat setuju / Strongly agree
 - b. Setuju / Agree
 - c. Tidak setuju / Disagree
 - d. Sangat tidak setuju / Strongly disagree

MODUL ROKOK ELEKTRONIK / VAPE ECIGARETTE / VAPE MODULE

41. Adakah anda pernah mendengar tentang rokok elektronik / vape? / **Have you ever heard of e-cigarettes / vape?**
- a. Ya / Yes
 - b. Tidak / No
42. Adakah anda pernah menggunakan rokok elektronik / vape? / **Have you ever tried using e-cigarettes / vape?**
- a. Saya tidak pernah gunakan rokok elektronik / vape / **I have never tried using e-cigarettes / vape**
 - b. Saya pernah gunakan rokok elektronik / vape / **I have tried using e-cigarettes / vape**
43. Berapakah umur anda ketika mula-mula menggunakan rokok elektronik / vape? / **How old were you when you first tried using e-cigarette / vape?**
- a. Saya tidak pernah gunakan rokok elektronik / **I have never tried using e-cigarette / vape**
 - b. 7 tahun dan ke bawah / **7 years old or younger**
 - c. 8 atau 9 tahun / **8 or 9 years old**
 - d. 10 atau 11 tahun / **10 or 11 years old**
 - e. 12 atau 13 tahun / **12 or 13 years old**
 - f. 14 atau 15 tahun / **14 or 15 years old**
 - g. 16 tahun dan ke atas / **16 years old or older**
44. **Dalam tempoh 30 hari yang lepas**, berapa hari anda telah menggunakan rokok elektronik / vape? / **During the past 30 days, on how many days did you use e-cigarette / vape?**
- a. 0 hari / **0 day**
 - b. 1 hingga 2 hari / **1 or 2 days**
 - c. 3 hingga 5 hari / **3 to 5 days**

- d. 6 hingga 9 hari / **6 to 9 days**
 - e. 10 hingga 19 hari / **10 to 19 days**
 - f. 20 hingga 29 hari / **20 to 29 days**
 - g. 30 hari / **All 30 days**
45. Dalam tempoh 30 hari yang lepas, pada hari anda menggunakan rokok elektronik, **KEBIASAANNYA** berapa kali anda telah menggunakan rokok elektronik / vape **SEHARI?** / During the past 30 days, on the typical day of using e-cigarette, how many times did you **USUALLY** use e-cigarette / vape **PER DAY?**
- a. Saya tidak gunakan rokok elektronik / vape sepanjang 30 hari yang lepas / **I did not use e-cigarette / vape during the past 30 days**
 - b. 1 kali sehari / **Once per day**
 - c. 2 hingga 5 kali sehari / **2 to 5 times per day**
 - d. 6 hingga 10 kali sehari / **6 to 10 times per day**
 - e. 11 hingga 20 kali sehari / **11 to 20 times per day**
 - f. Lebih daripada 20 kali sehari / **More than 20 times per day**
46. Kali terakhir anda menggunakan rokok elektronik / vape dalam tempoh 30 hari yang lepas, bagaimanakah anda mendapatkan bekalan tersebut? / The last time you used e-cigarette / vape during the past 30 days, how did you get it?
- a. Saya tidak gunakan rokok elektronik / vape sepanjang 30 hari yang lepas / **I did not use e-cigarette / vape during the past 30 days**
 - b. Saya beli rokok elektronik / vape dari kedai / kios / kompleks membeli-belah / **I bought e-cigarette / vape from shop / kiosk / shopping mall**
 - c. Saya membeli rokok elektronik / vapedari gerai jalanan / pasar malam /'downtown' / 'uptown' / **I bought e-cigarette / vape from roadside stall / night market / 'downtown' / 'uptown'**
 - d. Saya membeli rokok elektronik / vape melalui internet / **I bought e-cigarette /vape online**
 - e. Saya mendapatkan rokok elektronik / vape daripada orang lain / **I got e-cigarette / vape from someone else**
 - f. Saya mendapatkan rokok elektronik / vape daripada kawan / **I got e-cigarette /vape from friends**
 - g. Saya mendapatkan rokok elektronik / vape daripada ahli keluarga saya / **I got e-cigarette / vape from my family**
 - h. Saya membeli rokok elektronik / vape dari farmasi / **I bought e-cigarette / vape from Pharmacy**
47. Apakah jenis rokok elektronik / vape yang **kali terakhir anda hisap?** / What type of e- cigarette / vape **did you last use?**

RUJUK GAMBAR DI APENDIKS 1 UNTUK PANDUAN REFER TO PICTURE IN APPENDIX 1 FOR GUIDANCE

- a. Saya tidak pernah gunakan rokok elektronik / vape / **I never use e-Cigarette /vape**
- b. Rokok elektronik pakai buang (tidak boleh di caj). Cth: ‘shisha-stick’ /**Disposable e-cigarette (not rechargeable)**. e.g: ‘shisha-stick’
- c. Kit rokok elektronik yang boleh di caj dengan pra-kartrij gantian. / **E-cigarette kit that can be charged with a pre-cartridge replacement**
- d. Kit rokok elektronik yang boleh di caj dan mempunyai takungan yang perlu saya isi dengan cecair / **E-cigarette kit that can be charged with a container which I need to fill with the liquid**
- e. Sistem modulasi / ‘Vape-MODS’ (saya menggunakan kombinasi alat yang berasingan: bateri, penggabus dan sebagainya yang perlu saya isi dengan cecair) / **Modular system / ‘Vape-MODS’ (I use a combination of discrete devices: battery, atomizer etc. which I need to fill with the liquid)**

48. Adakah rokok elektronik / vape yang anda gunakan **mengandungi nikotin?** / Does the e-cigarette / vape including vape that you use **contain nicotine?**
- Saya tidak pernah gunakan rokok elektronik / vape / I do not smoke e-cigarette / vape
 - Ya / Yes
 - Tidak / No
 - Tidak pasti / Not sure
49. **Dalam tempoh 30 hari yang lalu**, berapakah jumlah perbelanjaan yang dibelanjakan untuk menghisap rokok elektronik / vape anda? / In the past 30 days, how much did you spend to smoke your e-cigarette / vape?
- Saya tidak pernah membeli rokok elektronik/ vape / I never buy e-Cigarette / vape
 - Kurang dari RM50 / Less than RM50
 - RM50 – RM100 / RM50 – RM100
 - RM101 – RM300 / RM101 – RM300
 - RM301 – RM500 / RM301 – RM500
 - Lebih dari RM500 / More than RM500
 - Saya tidak tahu/tidak ingat / I don't know / I don't remember
50. Antara pilihan berikut, yang manakah merupakan penyebab anda mula menggunakan rokok elektronik / vape? / From the followings, which are the main reasons for you to start smoking e-cigarette / vape?
- Saya merasakan rokok elektronik / vape lebih selamat dari rokok biasa / I feel that e-cigarette / vape is safer than tobacco cigarette
 - Yes / Ya
 - Tidak / No
 - Saya tidak menggunakan rokok elektronik / vape / I do not smoke e-cigarette/ vape
 - Rokok elektronik / vape mempunyai perisa & bau yang saya suka / I like the taste and smell of the e-cigarette / vape
 - Ya / Yes
 - Tidak / No
 - Saya tidak menggunakan rokok elektronik/ vape / I do not smoke e-cigarette /vape
 - Saya ingin mencuba rokok elektronik / vape / I want to experiment with the e-cigarette / vape
 - Ya / Yes
 - Tidak / No
 - Saya tidak menggunakan rokok elektronik/ vape / I do not smoke e-cigarette /vape
 - Ajakan rakan-rakan atau ahli keluarga / Offered by friends or family members
 - Ya / Yes
 - Tidak / No
 - Saya tidak menggunakan rokok elektronik / vape / I do not smoke e-cigarette/ vape
 - Saya merasakan rokok elektronik / vape sangat popular / I feel that e-cigarette /vape is popular
 - Ya / Yes
 - Tidak / No
 - Saya tidak menggunakan rokok elektronik/ vape / I do not smoke e-cigarette /vape

- vi. Saya mengikut trend selebriti / idola / I follow celebrity / idol trend
- Ya / Yes
 - Tidak / No
 - Saya tidak menggunakan rokok elektronik / vape / I do not smoke e-cigarette/ vape
- vii. Saya merasakan rokok elektronik / vape boleh membantu saya berhenti merokok / I feel that e-cigarette / vape can help me to quit smoking
- Ya / Yes
 - Tidak / No
 - Saya tidak menggunakan rokok elektronik / vape / I do not smoke e-cigarette/ vape
- viii. Saya merasakan menggunakan rokok elektronik / vape sama seperti menghisap rokok biasa / I feel that smoking e-cigarette / vape is the same as smoking tobacco cigarette
- Ya / Yes
 - Tidak / No
 - Saya tidak menggunakan rokok elektronik / vape / I do not smoke e-cigarette/ vape
- ix. Rokok elektronik / vape mampu dimiliki / E-cigarette / vape is affordable
- Ya / Yes
 - Tidak / No
 - Saya tidak menggunakan rokok elektronik/ vape / I do not smoke e-cigarette /vape
- x. Rokok elektronik / vape lebih jimat dari rokok / E-cigarette / vape is more economical than cigarette
- Ya / Yes
 - Tidak / No
 - Saya tidak menggunakan rokok elektronik / vape / I do not smoke e-cigarette / vape
51. Adakah anda **SETUJU atau TIDAK** dengan kenyataan berikut: “Saya rasa saya mungkin seronok menggunakan rokok elektronik / vape” / Do you agree or disagree with the following: “I think I might enjoy using e-cigarette / vape.”
- Sangat setuju / Strongly agree
 - Setuju / Agree
 - Tidak setuju / Disagree
 - Sangat tidak setuju / Strongly disagree
52. **Dalam tempoh 12 bulan yang lepas**, pernahkah anda membaca risalah atau poster berkaitan dengan bahaya penggunaan rokok elektronik / vape? / During the past 12 months, have you ever read any pamphlets or posters on dangers of e-cigarette / vape use?
- Ya / Yes
 - Tidak / No
53. Apabila seseorang mula menggunakan rokok elektronik / vape, pada fikiran anda, adakah susah bagi mereka untuk berhenti? / Once someone has started using e- cigarette / vape, do you think it would be difficult for them to quit?
- Sudah tentu tidak / Definitely not
 - Mungkin tidak / Probably not
 - Mungkin ya / Probably yes
 - Sudah tentu ya / Definitely yes

54. Pada fikiran anda, adakah anda mampu untuk berhenti menggunakan rokok elektronik / vape jika anda mahu? / **Do you think you would be able to stop using e-cigarette / vape if you want to?**
- Saya tidak pernah menggunakan rokok elektronik / vape / **I have never used e-cigarette / vape**
 - Saya tidak lagi menggunakan rokok elektronik / vape sekarang / **I don't use e-cigarette / vape now**
 - Ya / **Yes**
 - Tidak / **No**
55. Adakah anda mahu berhenti menggunakan rokok elektronik / vape sekarang? / **Do you want to stop using e-cigarette / vape now?**
- Saya tidak pernah menggunakan rokok elektronik / vape / **I have never used e-cigarette / vape**
 - Saya tidak lagi menggunakan rokok elektronik / vape sekarang / **I don't use e-cigarette / vape now**
 - Ya / **Yes**
 - Tidak / **No**
56. **Dalam tempoh 12 bulan lepas**, adakah anda cuba untuk berhenti menggunakan rokok elektronik / vape? / **During the past 12 months, did you ever try to stop using e-cigarette / vape?**
- Saya tidak pernah menggunakan rokok elektronik / vape / **I have never used e-cigarette / vape**
 - Saya tidak menggunakan rokok elektronik / vape dalam tempoh 12 bulan lepas / **I don't use e-cigarette / vape in the past 12 month**
 - Ya / **Yes**
 - Tidak / **No**
57. Adakah anda pernah menerima **pertolongan atau nasihat** untuk berhenti menggunakan rokok elektronik / vape? / **Have you ever received help or advice to help you stop using e-cigarette / vape?**
- Saya tidak pernah menggunakan rokok elektronik / vape / **I have never used e-cigarette / vape**
 - Tidak, saya tidak pernah terima sebarang bantuan atau nasihat untuk berhenti menggunakan rokok elektronik / vape / **No, I have never received any help or advice to stop smoking e-cigarette / vape**
 - Ya, daripada program berhenti merokok di sekolah / **Yes, from anti-smoking program at school**
 - Ya, daripada perkhidmatan berhenti merokok di klinik / hospital / **Yes, from clinic / hospital quit smoking service**
 - Ya, daripada rakan-rakan / **Yes, from my friends**
 - Ya, daripada ahli keluarga / **Yes, form my family members**
 - Ya, daripada semua sumber di atas / **Yes, from all sources stated above**
 - Ya, dari lain-lain sumber / **Yes, from other source**
58. **Dalam tempoh 30 hari lepas**, pernahkan sesiapa enggan untuk menjual rokok elektronik / vape kepada anda disebabkan oleh umur anda? / **During the past 30 days, did anyone refuse to sell you e-cigarette / vape because of your age?**
- Saya tidak pernah cuba untuk mendapatkan rokok elektronik / vape yang dijual dalam tempoh 30 hari lepas / **I did not try to buy e-cigarette / vape during the past 30 days**
 - Ya, ada seseorang enggan menjual rokok elektronik / vape kepada saya kerana umur saya / **Yes, someone refused to sell me e-cigarette / vape because of my age**
 - Tidak, umur saya tidak menghalang saya untuk menjadi pembeli rokok elektronik / vape / **No, my age did not keep me from buying e-cigarette / vape**

59. Pernahkah anda ditawarkan untuk mencuba rokok elektronik / vape secara percuma oleh mana-mana penjual? / Has any e-cigarette / vape vendor ever offered you a free trial session of e-cigarette / vape?
 a. Ya / Yes
 b. Tidak / No
60. Pernahkah anda ditawarkan cecair rokok elektronik / vape (e-liquid) secara percuma oleh mana-mana penjual? / Has any e-cigarette / vape vendor ever offered you a free e-cigarette / vape liquid (e-liquid)?
 a. Ya / Yes
 b. Tidak / No
61. Jika rakan baik anda menawarkan rokok elektronik / vape, adakah anda akan mencubanya? / If one of your best friends offered you e-cigarette / vape, would you use it?
 a. Sudah tentu tidak / Definitely not
 b. Mungkin tidak / Probably not
 c. Mungkin ya / Probably yes
 d. Sudah tentu ya / Definitely yes
62. Adakah anda merasa rokok elektronik / vape kurang berbahaya, sama bahaya atau lebih bahaya dari merokok? / Do you feel that e-cigarette / vape is less harmful, equally harmful or more harmful than cigarette smoking?
 a. Kurang berbahaya dari merokok / Less harmful than cigarette smoking
 b. Sama bahaya dengan merokok / Equally harmful than cigarette smoking
 c. Lebih bahaya dari merokok / More harmful than cigarette smoking
63. Dalam masa 12 bulan akan datang, adakah anda terfikir akan menggunakan rokok elektronik / vape? / At any time during the next 12 months, do you think you will use e-cigarette / vape?
 a. Sudah tentu tidak / Definitely not
 b. Mungkin tidak / Probably not
 c. Mungkin ya / Probably yes
 d. Sudah tentu ya / Definitely yes

MODUL SHISHA SHISHA MODULE

64. Pernahkan anda mencuba menghisap shisha, walaupun hanya satu atau dua sedutan? / Have you ever tried/experimented with shisha smoking, even one or two puffs?
 a. Ya / Yes
 b. Tidak / No
65. Berapakah umur anda ketika mula-mula menghisap shisha? / How old were you when you first tried smoking shisha?
 a. Saya tidak pernah menghisap shisha / I have never tried smoking shisha
 b. 7 tahun atau kurang / 7 years old or younger
 c. 8 atau 9 tahun / 8 or 9 years old
 d. 10 atau 11 tahun / 10 or 11 years old
 e. 12 atau 13 tahun / 12 or 13 years old
 f. 14 atau 15 tahun / 14 or 15 years old
 g. 16 tahun dan ke atas / 16 years old or older

66. Dalam tempoh 30 hari yang lepas, berapa harikah anda menghisap shisha? / During the past 30 days, how many days do you smoke shisha?
- Saya tidak menghisap shisha dalam masa 30 hari yang lepas / I did not smoke shisha in the past 30 days
 - 1-2 hari / 1-2 days
 - 3-5 hari / 3-5 days
 - 6-10 hari / 6-10 days
 - Lebih dari 10 hari / More than 10 days
67. Pada kali terakhir anda menghisap shisha, di manakah anda menghisap shisha? / The last time you smoked shisha, where did you smoke?
- Saya tidak pernah menghisap shisha / I have never smoked shisha
 - Di rumah / At home

RISALAH MAKLUMAT IBU BAPA/ PENJAGA (RESPONDEN BAWAH 18 TAHUN)

1. Tajuk:

Tinjauan Penggunaan Tembakau Dan Rokok Elektronik Di Kalangan Remaja Malaysia 2016

2. Nama Penyelidik Utama dan Institusi:

Dr Abdul Aiman Abd Ghani, Institut Kesihatan Umum, Kementerian Kesihatan Malaysia

3. Nama Penaja:

Kementerian Kesihatan Malaysia

4. Pengenalan:

Kementerian Kesihatan Malaysia sedang menjalankan Tinjauan Penggunaan Tembakau Dan Rokok Elektronik Di Kalangan Remaja Malaysia 2016 pada tahun ini. Maklumat di bawah akan menjelaskan hal- hal berkenaan tinjauan tersebut untuk anda membenarkan anak anda menyertai tinjauan ini.

Adalah penting untuk anda memahami mengapa tinjauan ini dilakukan dan apa yang perlu anak anda lakukan. Sila ambil masa yang secukupnya untuk membaca dengan teliti penerangan yang diberi sebelum anda memberi persetujuan untuk anak anda menyertai tinjauan ini. Jika anda mempunyai sebarang kemosykilan ataupun memerlukan maklumat lanjut, anda boleh bertanya dengan mana-mana ahli kumpulan tinjauan ini.

Setelah anda memahami maklumat tinjauan ini dan memberi keizinan untuk anak anda mengambil bahagian, anda perlu menandatangani Borang Persetujuan Ibu Bapa/ Penjaga (**Salinan Ibu- Bapa/ Penjaga & Salinan Penyelidik**) yang disertakan pada risalah ini. Penyertaan anak anda dalam tinjauan ini adalah secara sukarela dan anak anda boleh menarik diri pada bila-bila masa. Anak anda boleh tidak menjawab mana-mana soalan atau menarik diri sekiranya tidak mahu. Keengganan anak anda untuk mengambil bahagian atau menarik diri tidak akan menjelaskan sebarang manfaat perubatan atau kesihatan yang sememangnya hak anak anda.

Tinjauan ini ditaja sepenuhnya oleh Kementerian Kesihatan Malaysia dan telah mendapat kelulusan Jawatankuasa Etika dan Penyelidikan Perubatan, Kementerian Kesihatan Malaysia.

5. Apakah tujuan tinjauan ini dilakukan?

Tujuan tinjauan ini dijalankan adalah untuk memperolehi maklumat berkaitan dengan status penggunaan tembakau dan rokok elektronik di kalangan remaja di Malaysia. Maklumat yang diperolehi ini akan dikaji dan dinilai bagi membantu perancangan polisi penggunaan tembakau dan rokok elektronik. Tinjauan ini akan meliputi 13500 pelajar-pelajar sekolah seluruh Malaysia yang terpilih secara rawak.

6. Apakah yang perlu anak saya lalui/lakukan sekiranya bersetuju menyertai tinjauan ini?

Anak anda perlu menjawab soalan kaji selidik yang disediakan.

7. Apakah tanggungjawab anak saya sewaktu menyertai tinjauan ini?

Adalah penting untuk anak anda menjawab kesemua soalan yang disediakan dengan lengkap. Menyertai tinjauan ini tidak memerlukan anda atau anak anda mengeluarkan sebarang perbelanjaan.

8. Apakah risiko dan kesan-kesan sampingan menyertai tinjauan ini?

Tiada risiko terhadap anak anda sekiranya menyertai tinjauan ini.

9. Apakah manfaatnya anak saya menyertai tinjauan ini?

Tinjauan ini tidak mempunyai sebarang manfaat Kesihatan dan kewangan secara langsung apabila anak anda menyertai tinjauan ini. Walaubagaimanapun, segala maklumat yang diperolehi daripada tinjauan ini akan dapat membantu Kementerian Kesihatan dalam merancang polisi pengunaan tembakau dan rokok elektronik di Malaysia.

10. Adakah maklumat perubatan anak saya akan dirahsiakan?

Segala maklumat anak anda yang diperolehi dalam tinjauan ini akan disimpan dan dikendalikan secara sulit, bersesuaian dengan peraturan-peraturan dan/ atau undang-undang yang berkenaan. Sekiranya hasil tinjauan ini diterbitkan atau dibentangkan kepada orang ramai, identiti anak anda tidak akan didedahkan tanpa kebenaran anda terlebih dahulu.

11. Siapakah yang perlu saya hubungi sekiranya saya mempunyai sebarang pertanyaan?

Sekiranya anda mempunyai sebarang soalan mengenai tinjauan ini atau memerlukan keterangan lanjut, Tuan/ Puan boleh hubungi Ketua Penyelidik, Dr Abdul Aiman Abd Ghani, di Institut Kesihatan Umum, Jalan Bangsar, Kuala Lumpur di talian 03-22979400.

Jika anda mempunyai sebarang pertanyaan berkaitan dengan hak-hak anak anda sebagai responden dalam tinjauan ini, sila hubungi Setiausaha, Jawatankuasa Etika & Penyelidikan Perubatan (MREC), Kementerian Kesihatan Malaysia di talian 03-22874032.

BORANG PERSETUJUAN IBU BAPA/ PENJAGA (*Salinan Ibu Bapa/Penjaga*)

Tajuk kajian : Tinjauan Penggunaan Tembakau Dan Rokok Elektronik Di Kalangan Remaja Malaysia 2016

Dengan menandatangani di bawah, saya mengesahkan bahawa:

	Sila tandakan ✓ di dalam kotak
1. Saya telah diberi maklumat tentang tinjauan di atas dan saya telah membaca dan memahami segala maklumat yang diberikan di dalam risalah ini.	
2. Saya mempunyai masa yang secukupnya untuk mempertimbangkan penyertaan anak saya dalam tinjauan ini dan telah diberi peluang untuk bertanyakan soalan dan semua soalan saya telah dijawab dengan memuaskan.	
3. Saya faham bahawa penyertaan anak saya adalah secara sukarela dan boleh menarik diri daripada tinjauan ini pada bila-bila masa tanpa memberi sebarang sebab.	
4. Saya memahami risiko dan manfaat dari tinjauan ini dan saya memberi keizinan secara sukarela untuk anak saya mengambil bahagian dalam tinjauan. Saya faham bahawa anak saya mesti mengikuti arahan yang berkaitan dengan penyertaannya dalam tinjauan ini.	
5. Saya akan menerima satu salinan maklumat tinjauan/borang persetujuan ibu bapa/penjaga termaklum ini yang telah ditandatangani dan bertarikh.	

Saya, _____ memberi/tidak memberi keizinan* untuk anak/jagaan saya bernama _____ dari kelas _____ mengambil bahagian di dalam Tinjauan Penggunaan Tembakau dan Rokok Elektronik di Kalangan Remaja Malaysia 2016 seperti mana yang telah dimaklumkan. (***Potong yang tidak berkenaan**)

PARENT/ GUARDIAN INFORMATION SHEET (RESPONDENTS BELOW 18 YEARS OLD)

1. Title:

Tobacco And Electronic Cigarette Survey Among Malaysian Adolescent 2016

2. Name of investigator and institution:

Dr. Abdul Aiman Abd Ghani, Institute for Public Health, Ministry of Health

3. Name of sponsor:

Ministry of Health

4. Introduction:

Ministry of Health is conducting the Tobacco And Electronic Cigarette Survey Among Malaysian Adolescent this year. This brochure is to request for your consent to allow your child to participate in this survey.

It is important that you understand why the survey is being done and what your child will involve. Please take your time to read through and consider this information carefully before consenting for your child to participate in this survey. Should you have any questions or requires more information, you may ask any team member of this survey.

Once you understood the survey information and consented your child to participate, you must sign the Parents / Guardian Consent Form (**both: Copy for Parents/Guardian & Copy for Data Collector**) which are included in this information sheet. Your child participation in this survey is voluntary and your child may withdraw at any time. Your child has option not to answer any questions or withdraw from examination if he/she chose to do so. Your child's refusal to participate or withdrawal will not affect any medical or health benefit that is certainly your child's right.

This survey is fully sponsored by the Ministry of Health Malaysia and has been approved by the Medical Research and Ethics Committee, Ministry of Health Malaysia.

5. What is the purpose of the survey?

The purpose of this study is to obtain the information on the current tobacco and electronic cigarette usage among youth in Malaysia. This information will be reviewed and evaluated to assist the formulation of smoking policies.

6. What will happen if your child decides to take part?

Your child will have to answer the survey questions.

7. What are your child responsibilities when taking part in this survey?

It is important that your child answers all the questions in the questionnaire completely. This survey will not incur any cost to you or your children.

8. What are the potential risks and side effects of being in this survey?

None

9. What are the benefits of being in this survey?

This survey does not have any immediate health or financial benefits when your child agreed to join this survey. However, the information obtained from this survey may be helpful for the Ministry of Health in formulation of smoking & e-cigarette usage policies in our country.

10. Will my child medical information be kept private?

All your child information obtained in this study will be kept and handled in a confidential manner, in accordance with applicable laws and/or regulations. When publishing or presenting the study results, your child identity will not be revealed without your consent.

11. Who should I call if I have questions?

If you have any enquiries about this survey or if you require further information, you may contact the Principal Investigator, Dr Abdul Aiman Abd Ghani, at the Institute for Public Health, Jalan Bangsar, Kuala Lumpur, telephone number 03-22979573.

Should you have any questions regarding your child's rights as a respondent in this survey kindly contact: Secretary of the Medical Research and Ethics Committee, Ministry of Health Malaysia, by telephone 03-22874032.
